

## Kinesense for Law Enforcement

**Kinesense** helps law enforcement manage digital evidence quickly, easily, and securely.

The global growth in CCTV surveillance means video evidence is increasingly important in investigating crimes and prosecuting criminals. But this growth also brings an increased strain on investigators' resources. **Kinesense** makes products that reduce the time and effort it takes to retrieve, view, analyze and report on this evidence.

We specialize in video analysis technology that detects events automatically, eliminating the time normally spent sifting through hours of video for key events. **Kinesense** saves you time and money in CCTV investigations, freeing up resources and staff time.

Our video analysis software enables investigators to save up to 95% of time on investigations involving CCTV footage. We also offer hardware and software products that allow frontline police to access and share digital evidence of volume crime in minutes. Our products can be used by individual teams or deployed across your organization.

**Kinesense** technology is based on years of research, testing and deployment. It is currently used by police forces and security agencies worldwide, including technical support, major investigation, counterterrorism and serious crimes units, as well as overt and covert surveillance teams.

### Key Benefits

- Creates actionable intelligence, fast
- Saves up to 95% of time
- Enables secure chain of evidence
- Easy to use
